

VETERINARY CANNABINOID ACADEMY

2022/2023 Recommended Brands

www.vetcannacademy.com

HERE ARE OUR FAVORITES WITH NOTES AS TO WHAT SETS THEM APART. SPECIAL ATTENTION SHOULD BE PAID TO THE CONCENTRATION OF THE PRODUCT AND HOW THIS WILL AFFECT VOLUME FOR DOSING AND COST TO THE CLIENT, AS MANY OF THESE PRODUCTS VARY IN CONCENTRATION OF CANNABINOIDS.

VETCS & MEDCS: (ANIMAL) (HUMAN)

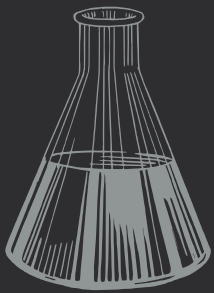

Founded by horse specialists (DVM and CVT), this company has outstanding manufacturing practices and a range of product concentrations, including concentrated pastes for those giant patients. They also carry a palatable feline product! Studies in horses are underway!

ELLEVET SCIENCES:

ElleVet was one of the first to validate their product with a study out of Cornell University. They have also published multiple other studies since then. CBDA constitutes nearly half of their cannabinoid profile which is less common with other brands and is cyclooxygenase inhibiting. ElleVet's Mobility Oil also has high levels of CBN and myrcene, making it helpful for clients who are looking for a product with more sedative properties.

HEMP MY PET:

This is one of the smaller companies but dedicated to producing a high-quality product and proving efficacy and safety with data!

CANNACOMPANION:

Started by two dedicated and knowledgeable veterinarians, their formulations not only have a diverse cannabinoid profile but a beautiful terpene profile. Their products are also currently being used in multiple clinical studies.

DOC SILVER NATURALS:

Formulated by a legend in plant-based and cannabis medicine, Dr. Rob Silver. The product is grown and manufactured in Colorado and was the first product to be certified by the National Animal Safety Council (NASC).

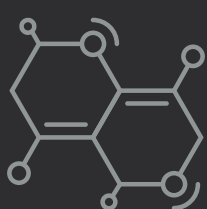

EARTH BUDDY:

Grown using organic principles in Colorado, we were astounded with the manufacturing and processing of this product. They also are innovating by adding helpful supplements including mushrooms and other herbs to their formulas for added benefit.

CBD VET OIL:

This product's terpene profile caught us off guard in a good way! The company owner (a veterinarian) has shown clear dedication to producing a quality product. cbdvetoil.com

ENDO BLEND:

While we don't love the marketing and information being shared by the company the product is sound. It is also one of the few products with high levels of CBC, CBDV, and CBG.

TREATIBLES:

This California-based company has been in the veterinary cannabis market for a long time. Their products are high quality and very palatable and the company is responsive to consumers. Perfect for animals needing low dosing.

MEDTERRA:

This is not a product we would suggest starting with but if you are looking to boost CBD concentrations or working with very scent sensitive animals this product does have clinical data behind it.

HEALER: (HUMAN BRAND)

We chose to feature this product as it is one of the few with less common cannabinoids. CBG is an emerging cannabinoid with many therapeutic benefits. (Healer.com) also makes some of the best full spectrum CBD and CBDA products around.

ZO CBD: (CBD+CBC+CBN)

We also chose to feature this product as it is one of the few with less common cannabinoids. CBN and CBC are emerging cannabinoids with many therapeutic benefits.

HIPPIE HOUNDS:

Created and owned by a veterinary assistant, these products have a nice cannabinoid and terpene profile and are highly palatable.

FURRY FACES CBD

This product is a good introductory formula. This product is high in bisabolol making it promising for things such as acute pain.

HOW THESE PRODUCTS WERE CHOSEN:

These products were selected based on several factors. The first and foremost is investment in clinical research for their products, which has provided both therapeutic dosing ranges and proven safety and efficacy information for practitioners. Next, we reviewed manufacturing practices, sourcing of cannabis raw materials (preference given to US or European grown), and acceptable and complete Certificates of Analysis (CoA). We understand there are many, many good products available and look forward to featuring these in the future. All of these products are hemp based, containing less than 0.3% THC.

IT'S HERE!
